Extracts of NIC Guidelines for Third Party Audit

1. Guidelines

- a. A black box approach of application security audit based on OWASP or other standard is to be adopted for the purpose audit. This may be combined with source code review.
- b. Security audits are to be conducted in iterative cycles (may be called a level) of testing and code correction till identified safe for hosting.
- c. In certain cases audit is conducted on a third party URL or on user system. In addition, the auditor, stating that CD contents have been audited, makes the audited contents available on CD in sealed cover to Auditee Organisation.
- d. The Test URL where the test was done as well as the Production URL where the site will be hosted is to be mentioned clearly in the certificate.

2. The Audit Certificate should be complete as to state the permissions on file system/site level required for hosting the site and application.

- a. Permission includes Read, Execute and Write etc.
- b. If any other permission is to be given then this also must be clearly stated.
- c. The certificate to state what permission is to be given at the folder or site level and not to individual files.
- d. Care to be taken that combined write+ execute permission is not given on any folder/site.
- e. If there is a requirement in the application for file uploads/ or writing to folders/files, then the absolute URL of the hosting folder needs to be specified along with the permission required.
- f. In addition, the permission requirement for the rest of the site also needs to be stated. Care should be taken to see that no folder gets a combination of Write + Execute permission.
- g. Preferably, segregation of dynamic pages or applications into separate folders under a site comprising of static information is to be considered.

Note: Refer Execute Permission in Appendix-A

3. The report to mention about the nature of the site: viz: static or dynamic i.e. site with applications.

a. If the site is host to Applications with closed user group access, then this is to be stated.

b. If the site/application is open for generic visitors, then this is to be stated.

c. Kind of authentication used such as Basic or Form Based or certificate based is to be stated

d. If the site is host to web based Content Management module as part of the site then this is to be stated.

e. The sites as in C. above are to be recommended for SSL deployment for the folder hosting the Closed User group (CUG) application. This is to be done after segregating the CUG application to a separate folder.

f. If the site is host to an administration module for administering tender, announcement, auction etc. then this also is to be stated.

4. Non-functional links are to be tested after restoring functionality instead of just being reported as observations on non-functional URLs.

5. Care to be taken in recommending Execute permission for sites. If the applications have not been tested due to non-function and execute permission is recommended, the forms will be subsequently made functional. Therefore, this will mean that applications with vulnerabilities go into production.

6. Clarifications regarding audit report or security certificate or information in the certificate found insufficient to host the site will be sought from Auditor. If required, a revised document may be sought.

This is to be stated clearly along with production URL and Staging URL address. The certificate should state clearly as to that, the site is free from application vulnerabilities as per OWASP or any standard prescribed from the competent agency and is safe for hosting.

Appendix-A

Execute Permission:

The term Execute permission means that a script or application is allowed to execute within the resource context of the host environment.

- a. Ex: An .asp script file hosted in an IIS environment may be given read and Script or Execute access at the site/virtual directory level in addition to Read permission at the file system level.
- b. Whereas a .php script file may be given, read access in an Apache web server host environment.
- c. These permissions may be determined with the help of the developer of the site.
- d. Special care to be taken in case of modules facilitating file uploads. Check should be done that a file once uploaded does not execute within the resource context of the site/folder. Combination of Write + Execute not to be given.
